

Graduation Ceremony – Malaysian Meister Program (MMP) Batch 3

This moment that they have worked so hard to achieve did not come without some hardship. Finding a balance between working and studying, the sleepless nights, losing out on sleep, and stressing over exams and assignments have all come to an end.

The 3rd batch of NHF’s Malaysian Meister Program (MMP) students have recently graduated, and the convocation ceremony took place at the Selangor Human Resource Development Centre (“SHRDC”) on 9th September 2022.

It was a privilege and honour to have **Ts. Kamaruzaman bin Haji Md Ali**, the **Timbalan Ketua Pengarah Operasi & Pengurusan of Jabatan Pembangunan Kemahiran**, and **Mrs. Teh Sook Ling**, the **Executive Director of SHRDC**, together to witness the graduation of our Meisters.

On the event day, we took the opportunity to interview some of our Meisters and also their family members.

1. How do you feel now that you have graduated from the Meister Program?

Muhammad Raziq: Alhamdulillah, after so many challenges, I feel very grateful to have finally completed my studies and graduated on time.

Lim Keng Wai: I feel very excited and grateful because completing the 4-year program with both practical and theoretical components was not easy. You need to have a strong interest and be constantly motivated in order to succeed. Overall, I am very happy that I was able to finish this program on time.

Muhammad Syamir: Alhamdulillah, after 4 years, I finally graduated from the Meister Program and made my parents proud. Initially, they thought that this program would not benefit me for my career growth, but I was able to prove them otherwise. I would like to thank SHRDC and AGP for giving me the opportunity to join this program.

2. What was the most challenging or interesting part of your journey throughout the program?

Muhammad Raziq: The most challenging part was finding a balance between work and study. In the beginning, I struggled and often forgot to do the revision during the spare time of my working hours, but slowly I managed to improve this by setting out a scheduler.

Lim Keng Wai: I think the most interesting experience was the incredible teamwork given by my team members. We always seek and help each other whenever we face any challenges during the team project. We share a lot of good and sweet moments together, and this is something that I cherish the most. My most challenging experience was during the MCO. It was my final semester and I had trouble balancing work and studying. But overall, I felt very lucky to have my team members, who always support me from behind.

Muhammad Syamir: The best experience was the cooperation shown among my team mates during our team project, and we bonded really well.

3. What is your goal after you have finished your Meister Program?

Muhammad Raziq: I hope that I will be able to implement the knowledge that I have gained at work regardless of any industry, especially in mechanical skills.

Lim Keng Wai: I wish to further my studies to a higher level, at least until I have a Bachelor's or Master's Degree. I am hoping that this Meister Program could help me to achieve my career goals in the future.

Muhammad Syamir: My goal is to become an engineer in the automotive industry and be able to lead and inspire the younger generation. I would also like to enhance my skills and increase my capabilities by contributing and continuously sharing ideas and being part of the future automotive industry.

1. What's your opinion about the Meister Program and the expectation for your children upon graduating from the program?

Pn. Zalina binti Talib (mother to **Muhammad Fauzan**): In my opinion, this program is very useful for technical and skilled people because it gives exposure to those who want to gain practical experience and knowledge, especially in the manufacturing sector. As a mother, I pray that my son will be more successful in his career, able to become a good leader and mentor to the upcoming younger generation.

Pn. Khulifah binti Jala (mother to **Mohamad Akxar**): I think this program really helps my son to improve and expand his technical skills and knowledge. I genuinely think that this Meister Program gives a chance to students who are interested in developing technical skills. Thank you to SHRDC and AGP for giving this opportunity to my son. I hope that my son will be more successful in his career, and my advice to him is to never stop learning. If there is an opportunity for him to further his studies, he should go for it, and may he continue to be successful here at NHF.
