

**Corporate Blog: Universiti Tunku Abdul Rahman (“UTAR”) visit to Auto Global Parts Industries Sdn. Bhd. (“AGP”)**

On 28th August 2024, AGP welcomed students from UTAR for a plant tour at NHF headquarters in Meru, Klang. This event is part of our commitment to inspiring future professionals through first-hand exposure to the automotive manufacturing industry and real-life work environment.

The day began with an NHF Group overview presentation, where the students learnt about our position as a major distributor of genuine and alternative automotive body replacement parts in Malaysia. We highlighted our focus on providing quality automotive parts to customers and our commitment to adapt to the market needs. A safety briefing followed to ensure that everyone understood and followed our safety protocols throughout the visit.

During the plant tour, students observed the production process for metal and plastic automotive replacement body parts. Led by our experienced team members, the tour provided a behind-the-scenes look at the technology and techniques used in producing such components, such as the 3D laser welding and cutting machine, hemming robots, plastic injection machine, and many more. Additionally, the students also saw firsthand how raw

materials are transformed into high-quality automotive parts through precise engineering and strict quality control.

The event concluded with a group photo, commemorating the successful collaboration between AGP and UTAR. We believe such collaboration helps bridge the gap between academic learning and real-world application. We look forward to more opportunities to partner with educational institutions, offering students valuable insights and practical knowledge to prepare them for real-world work experiences.
